

IGH SOLUTIONS ACHIEVES VISA CISP CERTIFICATION FOR LEVEL 1 SERVICE PROVIDERS

Strict security standards back unique e-Commerce fulfillment platform

April 2nd, 2009

INVER GROVE HEIGHTS, MN -

IGH Solutions, a leader in e-commerce and fulfillment solutions for web-based gift card issuers, has received Visa Cardholder Information Security Program (CISP) certification for Level 1 Service Providers.

The IGH e-commerce platform allows retailers, restaurant chains and other gift card issuers to sell gift cards on their website without extensive investment in an e-commerce platform.

“Our e-Commerce solution is a configurable engine capable of delivering the appearance of a custom-developed site and the ease, value, and speed of an out-of-the-box solution” said Rachel Lockett, director of information technology at IGH Solutions. “Obtaining this certification demonstrates our commitment to security by meeting the rigorous requirements of Visa CISP and to providing the most secure e-Commerce solution in the industry.”

As a Level 1 Service Provider, IGH Solutions’ compliance with PCI Data Security requirements is a critical element in terms of protecting the process, storage, and transmission of cardholder data. Adhering to PCI data security requirements demonstrates that the highest security measures have been taken to protect cardholders’ sensitive information from potential data breaches.

ABOUT IGH SOLUTIONS

IGH Solutions is the leader in plastic card printing, personalization and fulfillment with a special emphasis on gift, loyalty, and membership cards. IGH Solutions offers industry-leading design, marketing and manufacturing expertise in creating custom card programs from initial design to individual consumer personalization, packaging, and fulfillment.
